

ZedaSoft[®] announces “Performance on Demand” upgrade to MiLToC[®] aggressor role player software

(Fort Worth, Texas – November 7, 2017) ZedaSoft, Inc., a simulation and visualization software company announces the addition of “Performance on Demand” to our Man-in-the-Loop Transfer of Control (MiLToC[®]) product. Our MiLToC[®] product allows users to transfer entities from a constructive simulation like ASCOT, Big Tac[™], XCITE or NGTS to our virtual cockpit simulation using the DIS v6 protocol standard. This instantaneous transfer puts the user in full control of the entity thereby increasing the realism of the adversary role in training scenarios. In the past the performance of a transferred entity was statically defined before the start of the training session. With the addition of our new “Performance on Demand” feature, the performance of the MiLToC[®] entity is now more realistically based on parametric data queried from the customer’s database at the time of transfer. The virtual simulation performance now matches the analyst data used in the battle planning process and after action reviews.

The MiLToC[®] transfer process to and from the virtual simulation can happen many times creating various personas through-out the training sortie. This feature optimizes the Subject Matter Expert (SME) instructor/operator to act as lead for the reconnaissance, CAP and strike groups all from one role player station. ZedaSoft’s CBA[®] for Simulation is the foundational framework providing the open architecture approach needed for this new feature. The benefits to this approach are:

- **Aggressor performance can be NASIC database driven**
- **Battle is dynamic and spontaneous**
- **SME expertise is maximized in every training session**
- **Intelligent MiLToC[®] entity leads a group of constructive entities maximizing target density**
- **Scenarios are unlimited during the training session**
- **The initial training environment is no longer the quality limiting factor**

About ZedaSoft

ZedaSoft develops innovative products for the simulation and visualization industry. Its customers include Lockheed Martin, BAE, U.S. Army, U.S. Air Force and other defense, Government and commercial organizations. The main goal at ZedaSoft is to strike the balance between realistic simulation and cost-effective deployed solutions utilizing modern simulation architecture.
